

33.5" wide

TEK34 and PRO34

Graphic Preparation

- ① Graphic Size
Suggested print width: 33³/₈"

For optimum performance the finished size should be 33³/₈" or less.
(For full-bleed graphics, print width 33.5" or more and trim to fit suggested size.)

- ② Suggested print height: 32" - 94"

An additional 4" is needed for attaching the graphic to the leader and wrapping around the inner cartridge to relieve tension from the adhesive joint.

Suggested print thickness
Not to exceed 10 mil

- ③ To allow for the banner to fully retract into the cassette, media thickness recommendations should not be exceeded. If lamination is used, the thickness and rigidity of the lamination should be considered when considering the thickness of the banner.

Viewable
Height: 32" - 94"

4" bleed area for attaching banner.
(This area will not be visible.)

Total
Height: 36" - 98"
